

## Clarification of ICM Dual CCT Training Programmes and progression

Doctors in ICM Dual CCT Programmes take longer to complete their training than they would do if they were training in just one of the specialties. Moving forwards into the new curriculum, this would also apply to ICM triple CCT programmes.

In counting the years of training, it is agreed that the training years start at admission to the first specialty training programme, and years are added linearly as they are completed irrespective of the responsibility levels reached in the individual specialties, assuming that satisfactory outcomes have been achieved.

The training year at entry (ST3/ST4 etc.) needs to be determined by the Training Programme Director. Due to the different entry routes, trainees may have covered varying amounts of the ICM curriculum prior to appointment, and so would enter at a different point; for example, a doctor from an ACCS core training programme may be appointed at ST4 instead of ST3 level to account for previous experience.

For detailed information on the respective Dual CCT Programmes, please see the following links on our website:
